Using the Projector with Your Laptop

Before you plug in to the Sanyo Digital Projector

1. Make sure you have connected the cable to the lap top into the **Computer In** port on the projector.

2. Turn on the projector

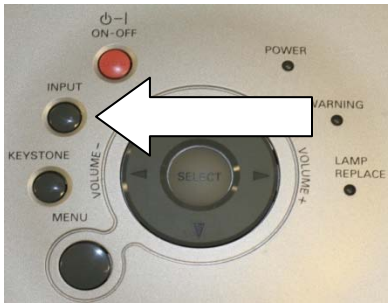
3. Then, turn on your laptop.

If you are using a Mac laptop, you may need an adapter to connect to the projector. Various adapters are available at the Imaging Center front desk, Bring your laptop by and we will find the right one for you.

Troubleshooting

If your laptop screen is NOT showing up on the projector screen.

Go to the buttons on the top of the projector and hit **Input**. Click though each of the channels until you see your laptop screen.



If that does not work, use the Input button to select Channel 1

- For PC: hit **FN** and **F8** together.

- For Mac: select **> System Preferences > Display**. Check the **Show Displays in Menu Bar** box.

  Next, click the icon at top of desktop and select **Detect Displays**.

  If you do not get a result, click the icon again and select **Turn on Mirroring.**

  If *mirroring does not work*, select **> System Preferences > Display**. Use the drop-down menu for **Refresh Rate** to select **60 hz**.

If the screen appears distorted when projected

First, set the resolution on your laptop:

- For PC: select **Start > Control Panel > Display**. Hit the **Settings** tab and use the **Screen Resolution** slider to set resolution at 1024 x 768
- For Mac: select **> System Preferences > Display**. Under **Resolutions** select **1024 x 768**

Next, reset the projector.

Go to the buttons on the top of the projector and hit **Menu**. Use the right arrow button

to highlight Hit **Select**. Then use the down arrow to highlight **True** on the projector. Hit **Select**.
